

September Updates from Xipiter.

Software Exploitation Via Hardware Exploitation Class November 10th - 13th

The second offering of our new [Software Exploitation Via Hardware Exploitation](#) class is scheduled for November 10th -13th in the DC metropolitan area. Our sold-out debut class at BlackHat was a huge success. Learn to hack consumer electronics, IoT devices, and other embedded systems. Seating is limited. [Register today!](#) (Early registration discounts end September 12th)

For info on Practical ARM Exploitation, and Android Exploitation courses [click here](#).

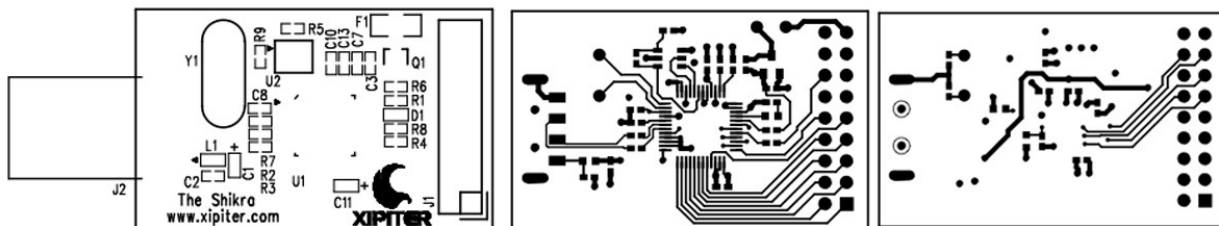

The USB Condom is now SyncStop

Please visit xipiter.com/newsletters

We now offer the most requested feature of the USB Condom...a case. We are proud to introduce "SyncStop". Pre-Order today. Shipping November 2014. Quantity discounts for teams available. Visit syncstop.com

Launching soon on int3.cc: Shikra

Shikra is a product we've always wanted but didn't quite exist. It can be configured to transfer data from USB 2.0 over the following interfaces UART, 245 FIFO, FT1248, I2C, SPI and GPIO. This means you can use UART, JTAG, SPI, i2C, and bitbang to your heart's content using this simple device.

The best is yet to come ...

We are internally hard at work on what will likely be our flagship enterprise security product. We are excited to share more information soon! We aren't saying it's a game changer ...but it is.
